

## *SLA is committed to assisting our customers in testing by:*

- Minimizing risks, testing cost & investment
- Improving time to market & product quality
- Providing an independent evaluation

### *Application Lifecycle Management System*

Having to choose between purchasing a requirements management, quality assurance, issue tracking or project management system? Tired of having to manually 'glue' together a patchwork of tools and systems from different vendors?

Take control of your project's development and testing lifecycle with **SpiraTeam™** from Inflectra

Corporation. **SpiraTeam™** is an integrated **Application Lifecycle Management (ALM)** system that manages your project's requirements, releases, test cases, issues and tasks in one unified environment.

SLA has partnered with Inflectra Corporation to provide SpiraTeam. SpiraTeam completes the Software Quality Assurance governance, storing all information in a single repository with traceability.

*The Best Cure for Software Headaches*

***Glitches. Collapses. Malfunctions.  
Call them what you want, but software that has not  
been tested properly will cause you headaches.  
At SLA we have the remedy.***

Top quality systems run by experienced professionals who know what to look for and can make sure that your software will deliver for your clients. Software testing is a specialist field – aimed at minimising risks and putting in place the correct defect prevention techniques.

### ***The Diagnosis***

When we are diagnosing software, we look for the symptoms:

- Is the critical functionality working?
- Is the software negatively affecting interacting systems?
- Will it produce tangible results to sell or deliver the product?
- Can we improve efficiencies through root cause analysis and identify areas for improvement?
- Are the metric reports uncovering future requirements and future proofing the code?
- Are we seeing faults early enough to prevent expensive consequences?

### ***Improving the Health of your Business***

By testing your software properly SLA will help you identify where your software is conforming and prevent any future negative financial impact of non-conformance. Non-conformance introduces the potential for your headache to spread. Internal failure in the early stages or external failure that will need diagnosis, repair of product and reputation, will cost your business in the short, medium and long terms.

### ***SLA Outsourced***

SLA offers Outsourced Testing Services to our customers. Our dedicated team of International Software Testing Qualification Board (ISTQB) certified testers provides a full range of Software Quality Assurance (SQA) services. This includes:

#### **Test Management Consulting**

- Overall Test Governance & Framework
- Requirements Gathering
- Test Strategy & Planning
- Test Case Creation
- Manual Testing

#### **Manual Testing**

- Functional Test (Validation & Verification)
- Regression Test
- Exploratory Test

#### **Test Automation**

- Automation Strategy & Planning
- Automation Scripting
- Execution & Analysis Reporting

#### **Stress & Performance Test**

- Framework Design
- Scripting
- Execution & Analysis Reporting

Our range of test services are platform agnostic so we have the ability to test any application or product that has a front end. We offer:

- **Testing client/server or mainframe applications**
- **Testing any web based applications**
- **Testing mobile content applications**
- **Testing banking & insurance applications**
- **Testing ERP systems & applications**
- **Other software quality projects**
